

The global EV industry has accomplished major achievements in a relatively short time, driven by regulatory pressure, strong technical innovation in batteries and increasing investment in EV platforms.

In Talum, we were carefully following these achievements and based on that, we had to upgrade our technology in order to satisfy our partners' demands.

Our latest achievement is a result of hard work of several months of designing, testing and validating new designs of channel systems with increased **internal channel height to 3.0 mm**.

With this achievement, we are now able to develop, manufacture and deliver cold plates which will **meet our partners' toughest challenges**.

**“From the idea ...
to innovative
solutions and
serial production.”**

● **3.0 mm**
